Healthcare Operations & Performance Analytics: Executive Report

1. Executive Summary

This report summarizes the key analytical findings and strategic recommendations derived from the 13,000 clean patient visit records, focusing on operational throughput, financial behavior, and scheduling metrics.

2. Key Analytical Insights

- **Departmental Demand:** Patient volume is highest in **Cardiology** (1,587 visits / 12.2%) and **Dermatology**, requiring priority clinical capacity and room allocation.
- **Financial Preferences:** Transactions show an even split across **Credit Card (24.4%)**, **Cash (23.9%)**, **Insurance (23.7%)**, and **Debit Card (23.0%)**, with digital/card payments accounting for **47.4%** combined.
- **Care Continuity & Follow-Up:** The average time gap between initial visit and follow-up consultation is **33 days**.
- **Seasonal Surge:** Patient intake steadily increases through the year, reaching its peak volume in **Q4** (over 1,600 visits per quarter).

3. Strategic Recommendations

1. **Resource Allocation:** Reallocate and increase clinical staff in high-demand departments (Cardiology & Dermatology) to match Q4 peak surges.
2. **Billing Infrastructure:** Standardize electronic POS card terminals evenly across outpatient clinics to support the 47.4% card payment preference.
3. **Follow-Up Optimization:** Implement automated SMS/email reminders scheduled 3 to 5 days prior to the 33-day follow-up mark to reduce patient no-shows.
4. **Data Governance:** Enforce strict front-desk validation rules at EHR intake to eliminate missing entries for doctors and departments.
